

This past week I've been running a few experiments with a site called ShareCash. ShareCash is a website that pays you money for sharing your files!

Every time a person goes to your ShareCash download link they have to enter a valid email address in order to continue to the download. For every email you collect successfully ShareCash will pay up to \$0.60.

I'm writing this report to show you how I've been able to make an average of \$30/day with no more than fifteen minutes worth of "work" every morning.

Click here to sign up - <http://sharecash.org>

Step 1) Download a porn clip from pornhub.com. Use the technique described here in order to download videos from pornhub for free:

http://headtoscreencollision.blogspot.com/2009/01/extracting-flv-video-files-behind_01.html

Amature videos work best, because they dont have copyright issues usually.

Step 2) Make 5-10 screenshots of different scenes in the video.

Step 3) Download winrar and make a new archive with the clip you just downloaded. Add a password to this archive.

Step 4) Create a new text file and write down the password to the archive in this file. Upload this textfile to ShareCash.

Step 5) Create a new text file called README.TXT with a link to the password file.

Step 6) Create a new archive and bundle the README.TXT file and the first archive you made.

Step 7) Google for porn forums, and upload the archives to them. Make sure to include screenshots in your post as well a description of the clip to make yourself look legit and avoid a ban.

Step 8) Get paid. I do about 5-10 forum posts a day and average \$30!!
